

STALKER[®] *Spectre Radar Detector Detector*

State-of-the-art radar detector detection for law enforcement.

**Spectre IV Radar Detector Detector -
Call Anytime for a Free Demonstration.**

**Stalker's Spectre RDD can be used
in either stationary or moving mode.**

Specifications

Operating Frequency 10 GHz - 25 GHz
Temperature Range 32° - 176° F
Power Requirement 11.5 - 14.5 VDC
Current Requirement 300 - 500 ma
Weight 1 lb.
Sensitivity -110 dBm @ 25 GHz typical
Detects FCC certified radar detectors
Dimensions 6.1" D x 3.5" W x 1.4" H

**Detects all FCC certified
radar detectors.**

Since Federal Law prohibits drivers of heavy commercial vehicles from using a radar detector - or even being in possession of a radar detector (Code of Federal Regulations 329.71) - it just makes sense to equip all patrol vehicles with the Stalker Spectre IV or IV+ Radar Detector Detector (RDD).

Detects Radar Detector "Leakage"

The Spectre IV RDD alerts the officer when it senses the

presence of radar detector "leakage," a characteristic electronic noise common to all radar detectors. Plus, the Spectre IV_± allows the officer to adjust the unit's sensitivity to leakage, an advantage in states that allow radar detectors in

passenger autos and where not every radar detector is illegal. The major benefit of this feature is that the officer can dial sensitivity down so far that the Spectre only alerts at short range, ensuring positive identification of the suspect vehicle.

Modern "Low-Leakage" Detectors Detected

Moreover, only Spectre IV and IV+ detect modern "low leakage" radar detectors used by the determined commercial vehicle violator. Advanced circuit design minimizes false alarms, and its anti-cloaking system defeats detectors with this feature. Give your officers every advantage you can. After all, if a commercial driver is in possession of an illegal radar detector, who knows what else he may be in possession of.
